## **BOOK SYNOPSIS**

Indications for central venous cannulation in critically ill patients have increased dramatically, but central venous access has the drawbacks of morbidity and a scarcity of experienced operators. Ultrasound-guided peripheral venous access offers a solution, in that it reduces morbidity and can be performed by a dedicated nursing team. The aim of this book is to teach the fundamentals of this emerging technique. Advice is provided on choice of materials; maneuvers for positioning of peripherally inserted central venous catheters (PICCs), techniques for evaluation of PICC tip placement; prevention, diagnosis, and management of complications; and organization of a dedicated team within a hospital or a supportive care program. Legal and economic issues are also considered. The book will be of interest to a wide range of professionals, including nutritionists, oncologists, anesthesiologists, surgeons, registered nurses, nurse practitioners, physicians, physician assistants, and radiologists.
